#### **ADVANCE CERTIFICATE COURSE IN DIABETIC NUTRITION**

A healthy diet is central to the management of diabetes. When you have diabetes you have to know a lot about food because food affects your blood sugar, your body weight, and your heart health. Diabetes is one of the biggest global public health problems: the prevalence is estimated to increase from 425 million people in 2017 to 629 million by 2045, with linked health, social, and economic costs. Urgent solutions for slowing, or even reversing, this trend are needed, especially from investment in modifiable factors including diet, physical activity, and weight. Diet is a leading contributor to morbidity and mortality worldwide according to the Global Burden of Disease Study carried out in 188 countries.<sup>2</sup> The importance of nutrition in the management and prevention of type 2 diabetes through its effect on weight and metabolic control is clear. However, nutrition is also one of the most controversial and difficult aspects of the management of type 2 diabetes. This certificate course will provide knowledge and competencies to students to facilitate the interventions and innovations in the area of Diabetes and nutrition. The modules will introduce key principles, theories and methods which underpin the study of Basics of diabetes and its Nutritional management. This course aims to equip the multidisciplinary diabetes healthcare providers with basic and essential nutrition knowledge on diabetes.

#### **Course Aims**
